### Cost-effective shipping

Transportation and handling of oil or bulk products is highly competitive. Fleet managers are looking for cost effective oil filtration systems ensuring all day functioning of equipment and engines.

## Patented water separation system lubrication oils constantly dried out

Our unique water separator dries out all phases of water ensuring maximum performance and improved life time. The principle operates with heated dry air in a continuous process which avoids stressing of the oil and a maintenance free water separation. The separator is included in all our units.

### Innovation

Installing and servicing wind farms in the North Sea requires oil filtration systems geared to heavy duty at all temperatures and weather conditions.

### First fit

Transportation and handling of oil or bulk products is highly competitive. Fleet managers are looking for cost effective oil filtration systems ensuring all day functioning of equipment and engines.

### Arbejds miljø

Cold forging presswork at 1000 tons of pressure requires that hydraulic and lubrication oils are extremely clean at constant high ISO 10/6 standard or even better.
